10 Most Promising New Linux Distributions to Look Forward in 2020

Martins D. Okoi | Last Updated: July 22, 2020 | New Linux Distros | 94 Comments

If you visit Distrowatch regularly, you will notice that the popularity ranking barely changes from one year to another.

There are Linux distributions that will always make it to the top ten, whereas others may be on the list today and not at the end of next year.

Another not so well-known feature of **Distrowatch** is a waiting list that consists of distributions:

- Not reviewed yet
- With missing or faulty components
- Without solid English documentation
- Projects that do not seem to be maintained anymore

Some of the distributions that have not been reviewed yet may be worthy of consideration due to their great potential. Keep in mind that they may never make it to the front page ranking due to lack of time or **Distrowatch** resources to review them.

For that reason, we will share a list of what we consider the **10** most promising new distros for **2020** and a brief review of each of them.

Since the Linux ecosystem is a live being, you can expect this article to be updated from time to time, or perhaps be radically different next year.

Modicia OS is an Ubuntu LTS and Debian-based Linux OS developed by **MODICIA Development Company** for their public bodies and professional clients.

It boasts of **10%** swappiness, program speed increase by **25%**, and **20%** RAM efficiency thanks to its active **Turbo Boost** processors. It also comes with Wine HQ pre-configured alongside the typically bundled apps, preinstalled dictionaries with multi-language support, etc.

Modicia OS is regularly updated and is available in 3 flavors, Desktop Ultimate, Light, and Didattico.
